

70X Laboratory Analyzer Remote Recertification Service

from Phase Technology

Here's How it Works:

Using Phase Technology calibration standards, a member of your staff will run test samples on your analyzer.

Send the test results and other analyzer performance data to Phase Technology.

Phase Technology will review the results of your sample runs and your analyzer performance for accuracy and precision.

If your analyzer is performing within specification, Phase Technology will issue a Certificate of Calibration.

If your analyzer needs calibration or maintenance in order to bring it up to acceptable performance levels, Phase Technology will prepare a service estimate for you and arrange a suitable time for factory service.

Phase Technology Remote Recertification Service

Reduce Uncertainty and Confirm That Your Analyzer's Performance is In-Spec

Phase Technology's Remote Recertification Service for your 70X Lab Analyzer takes the guesswork out of your test results. It provides you with assurance that your analyzer is performing within specification and that your test results are trustworthy.

The Value of Certification

With Phase Technology Remote Recertification, you can:

- Affirm that your analyzer meets and complies with ASTM International* standards measuring pour, cloud and freeze point: ASTM D5949, ASTM D5773 and ASTM D5972
- Update the Calibration Certificate for your analyzer to confirm your analyzer is performing within specification
- Establish credibility with customers and regulatory bodies that released product meets specified requirements
- Ensure readings from your analyzer are consistent with other measurements

What's Included

- Phase Technology Remote Recertification Service includes a set of current Phase Technology verification standards from each sample group appropriate for the equipment to be certified
- Review of Analyzer Performance
- Phase Technology Calibration Certificate
